

How To Transfer With Email

You don't need to mess with Calibre or connecting your phone to a PC to transfer eBooks to your Kindle. Every Kindle eReader has its own custom email address. You can send eBook files to this email address to wirelessly transfer them.

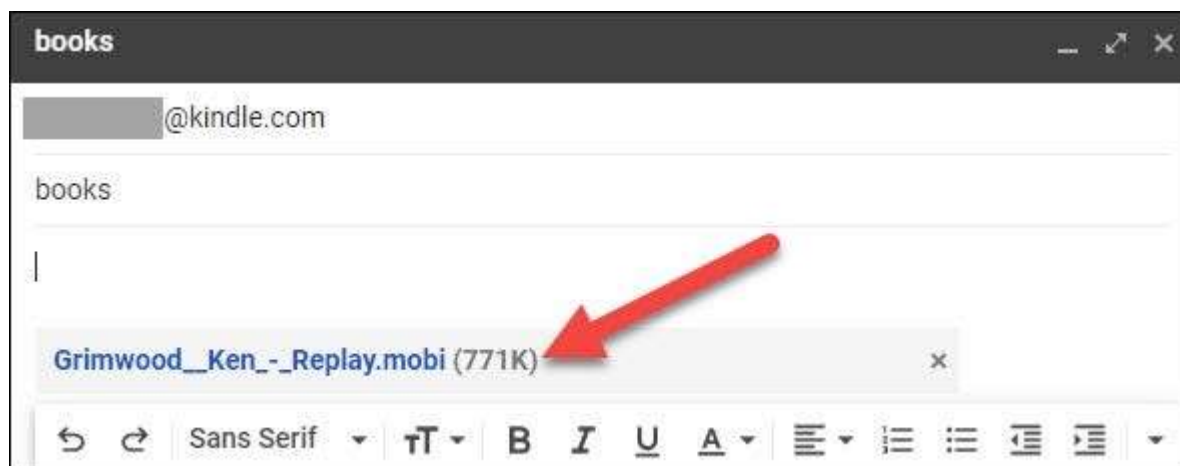

First, head on over to amazon.com/myk in a web browser on your PC or smartphone. Select the Kindle you want to use from the "Devices" tab and click the device name in the expanded menu.

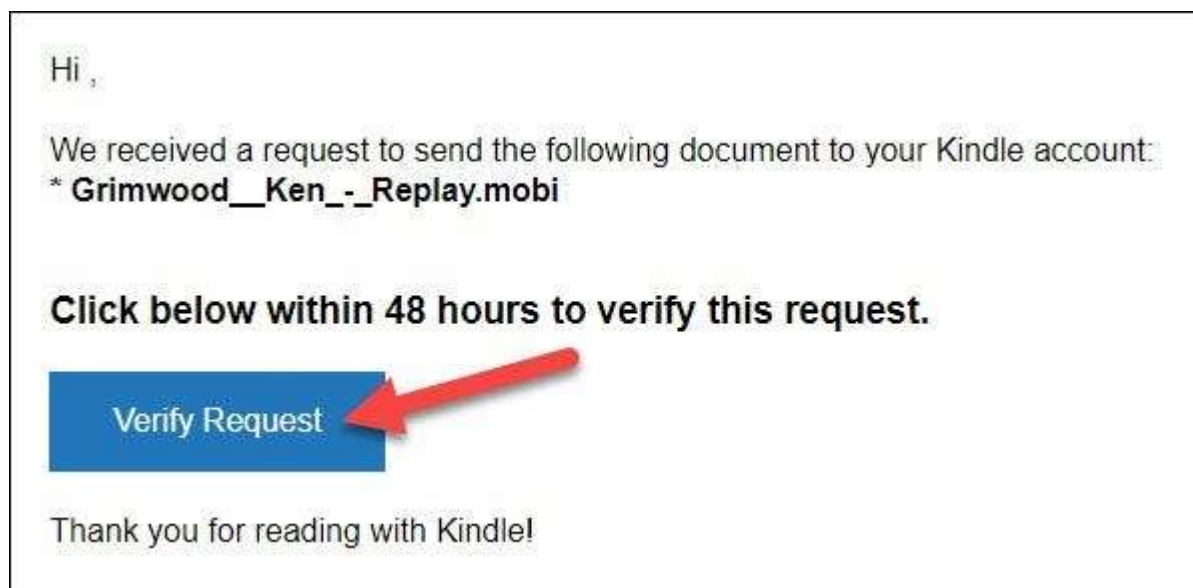

On the next page, you'll see the "@kindle.com" email address for your Kindle. You can select "Edit" to change the address if you'd like. Remember this email address.

Now, all there is to do is send an email to that address with your MOBI eBook attached!

After you send the email, you'll get an email from Amazon asking you to "Verify Request." This is just to confirm that you want to send the eBook to your Kindle.

The eBook will be sent to your Kindle eReader. You can force the Kindle to check for new books by opening the home screen menu and tapping the "Sync" button.

You may need to wait a few minutes, but it shouldn't take long for the book to appear in your Kindle Library.

Amazon could certainly make it easier to get EPUB eBooks onto Kindle Readers, but it's not impossible if you know what you're doing. Now you're free to get your eBooks from any number of outside sources. If you just want some free books, Amazon does have some options as well. Go forth and read!
